// PC lenses for metal sunglasses

// Rear side anti-reflection coating

// Prescription eyewear

Special FEATURES

EASY WEAR Ergofeel[®]

Our metal frames are equipped with the self-adapting Ergofeel nose pad system by Visottica. This allows the frame to adapt to various nose shapes and face morphologies.

COMFORT STRETCH

When we talk about Comfort Stretch, we refer to our spring hinges that offer wearers increased stability, improved ergonomics and increased wear comfort.

Special FEATURES

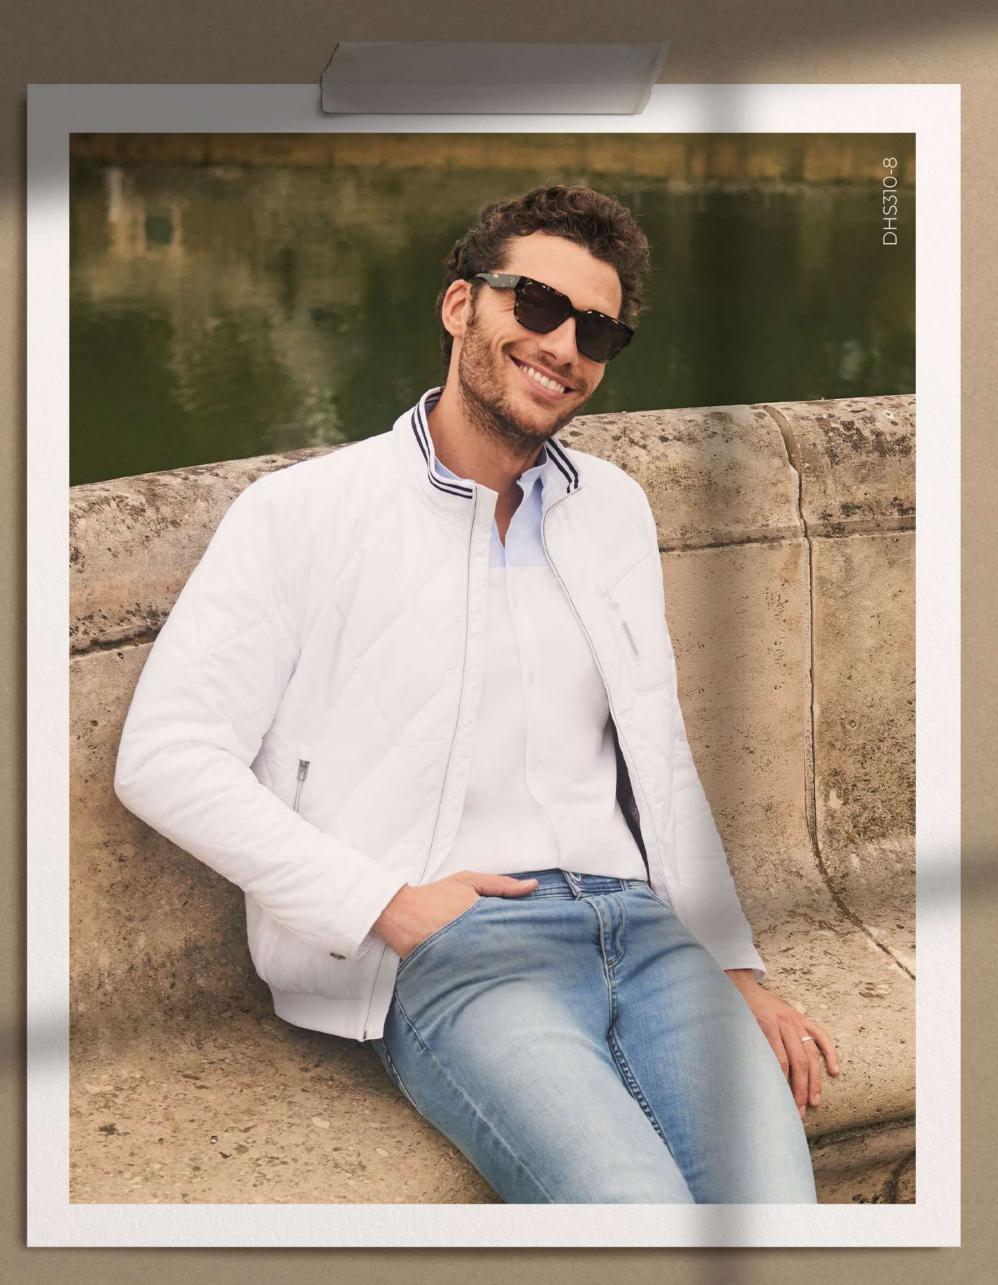

WATERPROOF

Our sunglasses are not just fashionable, but also equipped with a hydrophobic coating on the front of the sunshade lenses. This coating makes sure moisture just simply rolls off the lens surface.

ULTRALIGHT

Ultra-light and thin metal frames are among the most popular style trends in the world of glasses. These minimalistic, super-light solid metal designs are furthermore supplied with a slim bare metal temple.

Daniel Hechter COLLECTION

// Oriented on current Daniel Hechter fashion in Paris

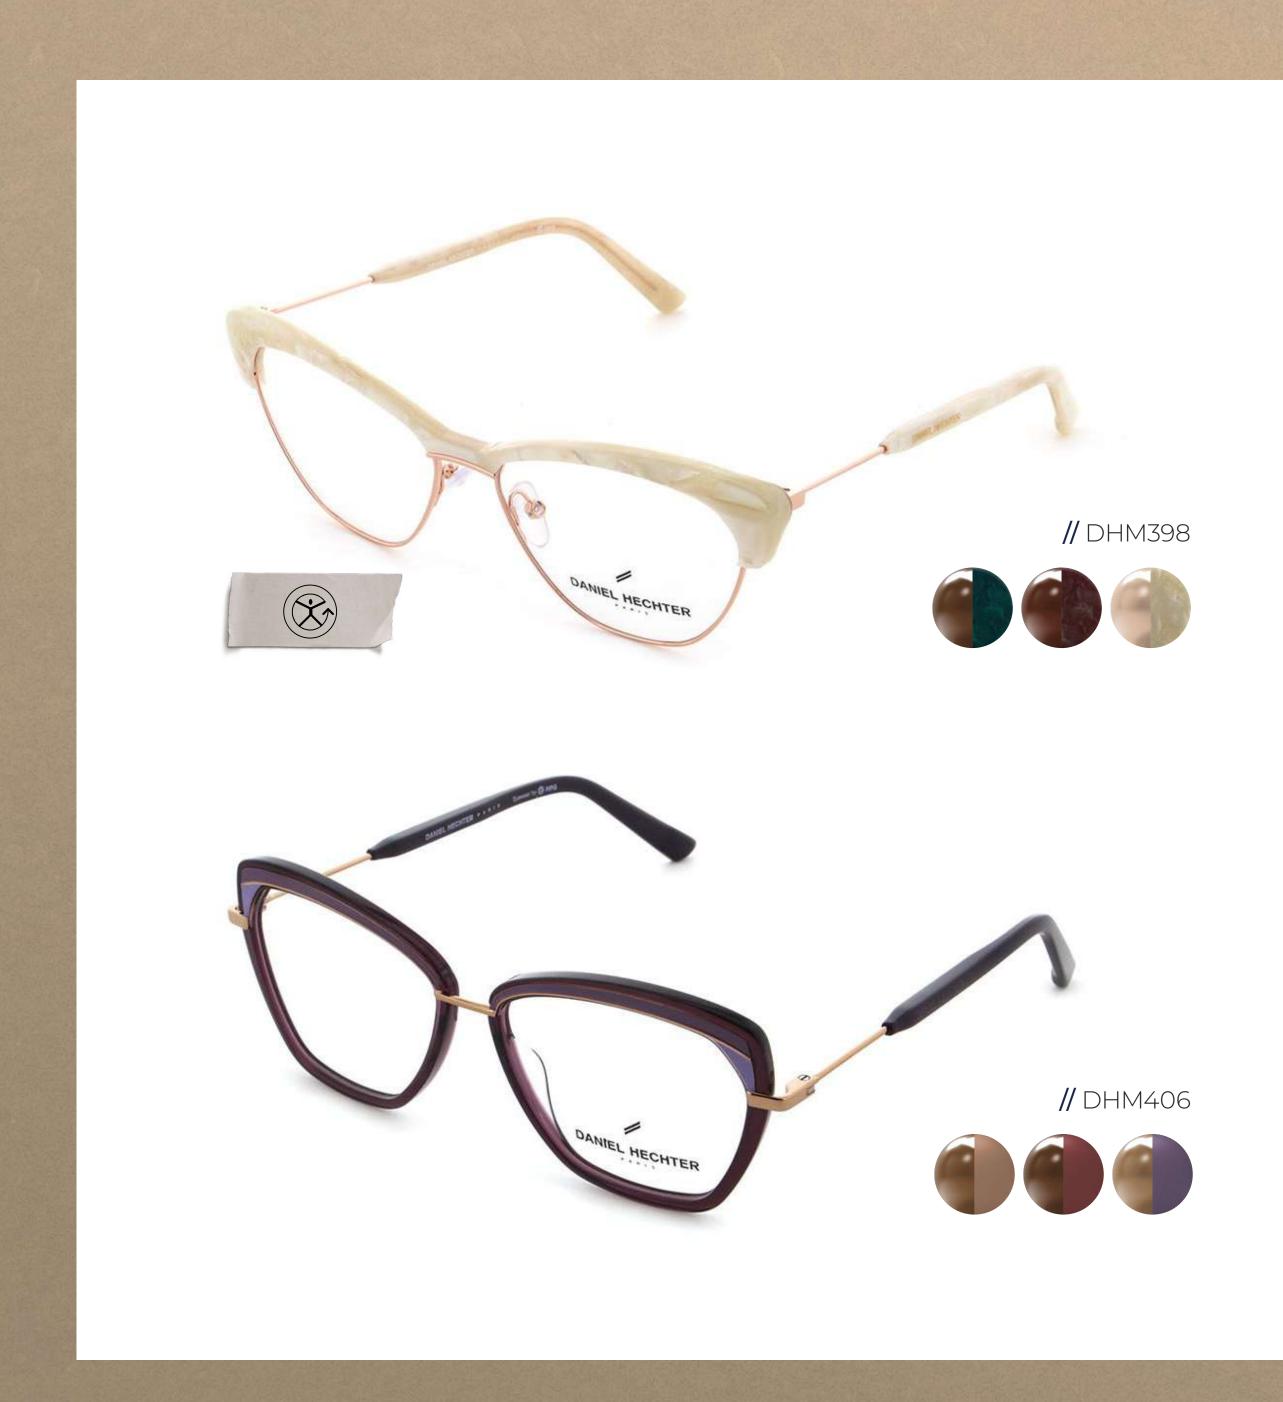

- // Fresh colour concepts because of eye-catchers like canary yellow, lavender or pumpkin orange
- // Acetate fronts and temple tips in pastel colours
- // Geometric shapes in acetate and metal for men and women

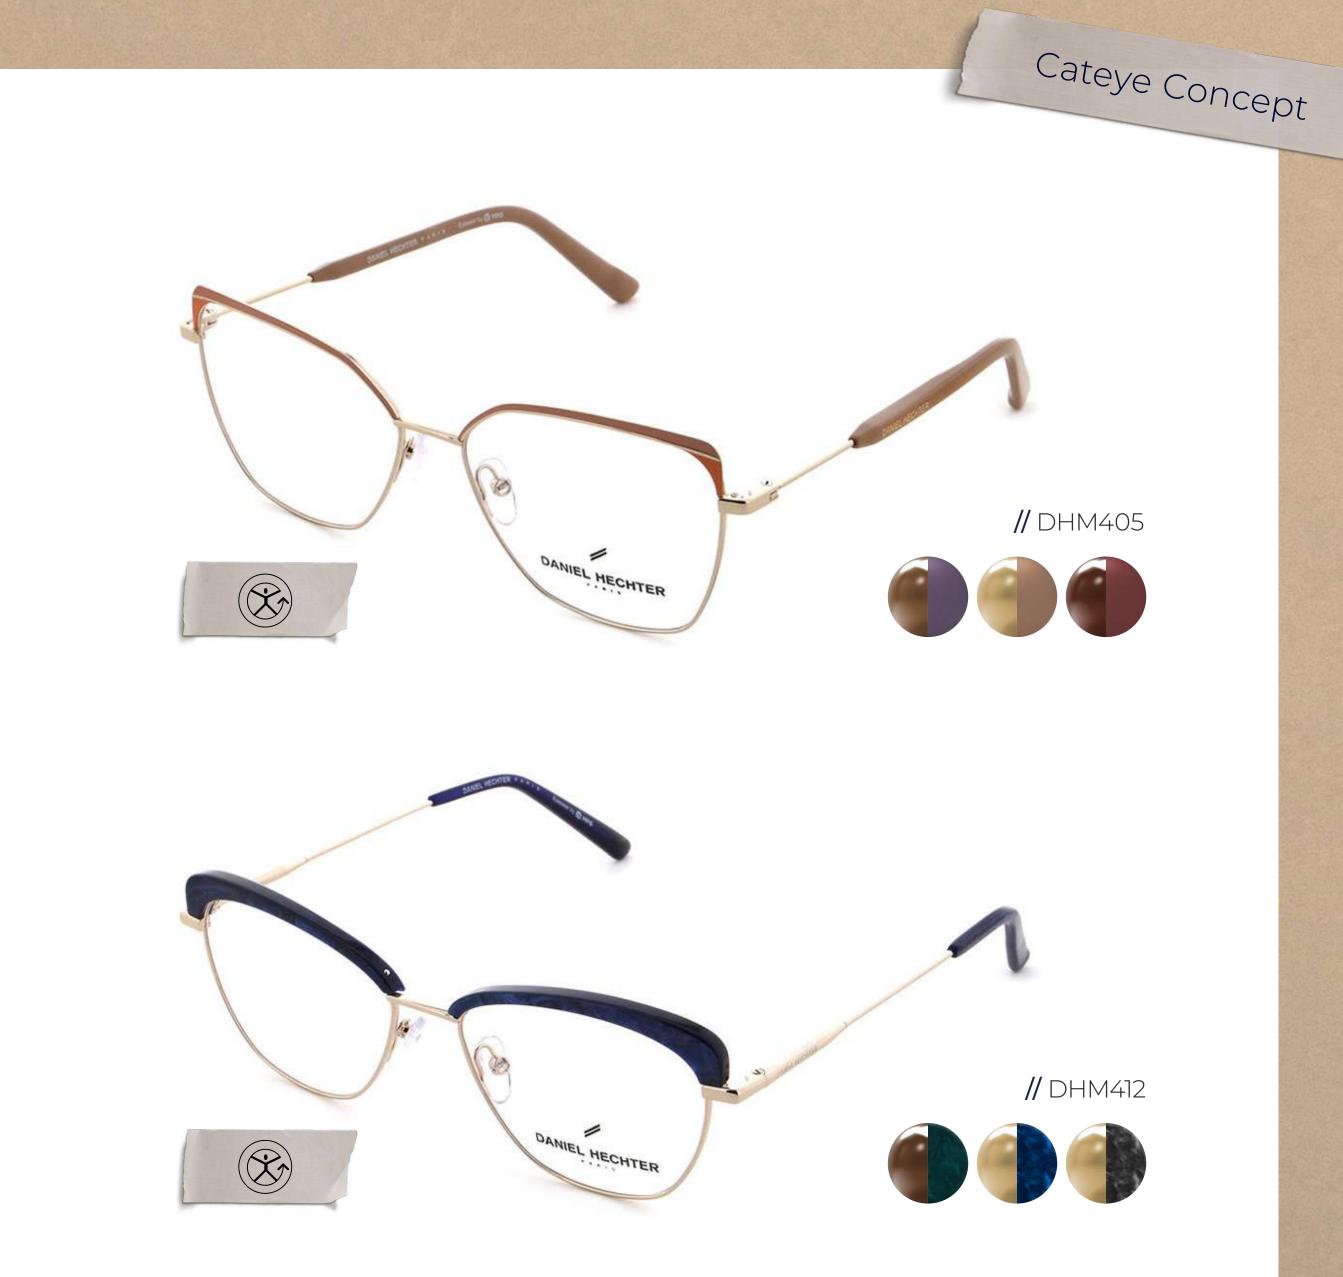

CATEYE CONCEPT

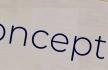

These frames shine with their stylish cateye shape and a comfortable feel thanks to the Visottica Ergofeel nose pads. The colour scheme ranges from simple designs to more striking designs such as the marble effect. Oversized models convince with a contrast between the filigree metal frame and the bulky statement temple.

MALE & UNISEX CONCEPT

This concept includes unisex models as well as typical men's frames that score with lightness and convince with nonchalance. The majority of the eyewear models are characterised by a "matt & shiny" effect, which is created by the combination of the shiny metal frames and the eye-rims with a matt finish. One model impresses with a striking acetate front that is milled in different thicknesses to create different height levels. The concept is kept in muted colours and embodies a discreet understatement.

WINDSOR-RIM CONCEPT

This product concept includes the classic Daniel Hechter Eyewear glasses, which stand for a simple and timeless design. Crafted from a delicate metal frame combined with a two-tone acetate Windsor rim, these styles shine with a blend of seriousness and nonchalance. Whether "Casual Friday" or "Daily Business", these models can be combined with any outfit. The distinguished colouring adds a certain touch of elegance.

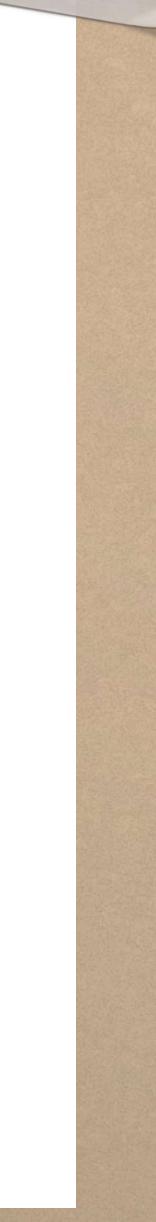

ACETATE CONCEPT

The new Acetate Concept is intended for all those who appreciate superlatives and at the same time value design nuances. The special feature of the design is the 3D effect that creates light reflections and is created by a special facet milling. The men's models of this concept stand out with a new positioning of the logo on the top of the temples. A fresh and modern colour scheme on the unisex models gives the frames a certain pep. The male models also impress with a more austere shape with timeless and muted colour combinations.
